

trulli

Company Fact Sheet

What Drives Us

Trulli's mission to help music lovers fully experience the music they love without compromise, anywhere and everywhere.

At Trulli, we believe listeners deserve more. More possibilities. More feeling. More of everything you love about music. With a small but mighty team of engineers and music lovers, we're dedicated to reimagining portability, power and pure sound quality.

Live From the Heart of the Midwest

Designed and hand-assembled outside Chicago, everything we make is about bringing listeners a better sound experience for the music they love.

We're not audio industry insiders. We're humble Midwest engineers and music fanatics. It's taken us years of design, testing, innovation and craftsmanship.

Trulli Different

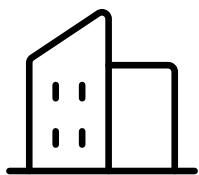

All Trulli Subwoofers deliver accurate bass thanks to the our use of patented, award-winning ThinDriver® Technology, which helps them deliver more power at a fraction of the size (and air volume) compared to conventional speakers. The TD10S Driver in the Trulli Bass50 System can handle 600 Watts of continuous power, peaking at just over 1,000W and delivers up to 122 dB (131 dB with the Trulli Universal Port). It has a frequency range from 20Hz to 225Hz (30Hz to 80Hz with the Trulli Universal Port).

Built From a Passion for Music

Trulli Audio is an independent audio company based in Mundelein, IL, founded by Len Foxman in 2016. The company was born from Len's lifelong love of jazz, matched with his extensive engineering credentials as long-time leader and president of Eagle Test Systems, which was acquired by Teradyne in 2008.
