BASS50

Product Fact Sheet

Product Overview

Bass50 is a battery-powered, high-output low-end system built for the pro audio / production / AV world—when you need music you can feel but you don't have the power budget—or you'd rather spend that power on lighting, video walls, and show elements.

Solving Common Low End Problems

Low-end is what draws the current. It's what makes the dance floor work. But at real gigs, power is always a trade-off—so Bass50 helps you deliver bigger sound + more output while reducing dependence on the grid.

Fits Into Existing Rigs

Bass50 is designed to work with the top speakers you already own and deploy audio as fast as you can power it on—from a small hang (20 people) to large-format deployments (up to 5,000) by scaling the system.

Built for Pro Audio

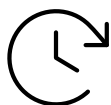

Built from Baltic birch, outdoor rated, and designed for the rugged world you expect from pro-audio cabinetry.

Powered by Patented ThinDriver® Technology

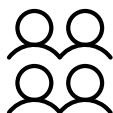

Bass50 is powered by the TD10S driver platform and includes internal “smarts” + accessory ecosystem that make it an AV game changer.

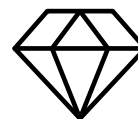

Bass50 Quick Facts

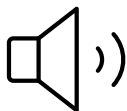

Fast setup and smart, consistent deployment

Scalable system from 20 to 5,000

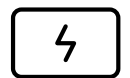

Rugged build made to live in the real world

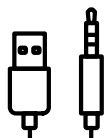

Runtime 5-10 hours at full volume

Removable, rechargeable battery

Charge time 2.5 hours from 0-100%

3.5mm Balanced TRS I/O, and Digital Audio USB-C I/O

Low latency SKAA Pro wireless connectivity

Trulli App for updates & custom tuning
