ThinDriver®

Product Fact Sheet

Overview

ThinDriver® is a family of globally patented, ultra-high performance subwoofer drivers designed to produce clear, loud bass while requiring about 1/3 of the air space you'd normally expect for that output.

Versatile Integration

ThinDriver® subwoofer drivers are engineered to deliver serious low-end while using dramatically less enclosure volume. It works across sealed, ported, and multiple bandpass alignments (4th / 6th / 8th)—so you can design for tight, punchy response or maximum output—without needing the giant box.

Designed, Assembled, and Tested in the USA

Our ThinDriver® subwoofer drivers are designed, engineered, hand-assembled, and tested at our Mundelein, IL headquarters, just outside Chicago. Everything we make is about bringing you a better sound experience for the music you love.

2026 ThinDriver® Lineup

TD 6.5 **S**

6.5" SUBWOOFER DRIVER

- 6.5" — 300W RMS
- 2.2" mounting depth
- High-performance low end for tight installs and modern constraints.

TD 10 **S**

10" SUBWOOFER DRIVER

- 10" — 600W RMS
- 2.7" mounting depth
- A 'go-to' size for builds that need serious output without sacrificing space.

TD 19 **S**

19" SUBWOOFER DRIVER

- 19" — 2000W RMS / 5000W RMS
- 4" / 6" mounting depth
- 2000W - High displacement bass for premium systems and demanding installs.
- 5000W - Extreme output potential for competition-level or flagship builds.
